

320 *Minutes of the Tasmanian Society.*

published in the London Journal of Botany, vol. iii. p. 408. Coals and fossil woods from Western Port, south coast of Australia. The analysis of this coal, by Count Streleski, is given at page 192 of vol. I. of the Tasmanian Journal.

Specimens of a species of *Cyttaria*, both dried and preserved in spirits, were exhibited by Mr. Gunn. It grows upon the trunk and branches of the *Fagus Cunninghami*, being ripe about 16th November, and seems to be very similar in every respect, save its smaller size, to the *Cyttaria Darwinii*, figured and described by Mr. Berkeley, in the Linnean Transactions, vol. xix. p. 37.

Some beautiful siliceous fossils, collected by Joseph Milligan, Esq. on the south east side of Flinders' Island, in Bass's Strait, were exhibited. They present very much the appearance of the cones and branchlets of *Casuarina*.
