362.1–.4 and 614.4–.5**People with illnesses and disabilities and Incidence of and public measures to prevent disease**

Use 362.1 and 362.4 for works on the social provision of services to people with physical illnesses or disabilities. Use 614.4–.5 for works on preventive measures, regardless of whether the emphasis is medical or social, e.g., social provision of immunization services and works on the medical aspects of immunization 614.47. Use 614.4–.5 for public measures strictly limited to preventive ones, e.g., fluoridation and programs advising people how to avoid cavities 614.5996; but programs to identify and treat people with cavities 362.19767. If in doubt, prefer 362.1.

Use 362.2 for works about the incidence and prevention of mental illness, mental illness as a social problem, and social provision of services to people with mental illness.

Use 614.4–.5 for studies of epidemics and the incidence of physical disease (including mental retardation and physical disabilities) when treated solely from the medical standpoint. Use 362.1 and 362.3–.4 for works emphasizing diseases as social problems. If in doubt, prefer 614.4–.5.

362.1–.4 vs. 610**Biographies and case histories of people with illnesses and disabilities, and biographies of medical personnel**

Use 362.1–.4, plus notation 092 from Table 1, for biographies and memoirs of people who are dying and people with illnesses and disabilities if the works lack any other disciplinary focus, since such works typically illustrate the way society addresses itself to fundamental health problems and their solution. Use 001–999 for works that focus on a specific discipline, e.g., a work offering guidance in the Christian life with respect to health misfortunes 248.86, Christian meditations in times of illness 242.4. Use 362.1–.4, without adding notation 092 from Table 1, for studies of individual cases designed for the use of researchers, practitioners, and students in the social services, e.g., studies of services to patients with heart disease 362.19612. Use 616–618, plus notation 09 Case histories from the table under 616.1–.9, for studies of patients describing their illnesses in medical terms rather than their lives in social terms, e.g., case studies of heart disease 616.1209. If in doubt, prefer 362; however, prefer 616.8909, 616.890092, and similar numbers for psychiatric disorders (subdivisions of 616.852, 616.858, 616.89,

618.76), since the consideration of external circumstances is generally subordinated to the discussion of the state of mind of the patient.

Use 610 for most biographies of medical personnel, but use 362 for works on public health doctors or nurses emphasizing their influence on public health services and awareness, e.g., a biography of a doctor noted chiefly for promoting nursing homes 362.16092.
